

Twin Rivers Pulp Ltd. is an integrated paper specialty company that produces pulp, paper and energy as well as a wide range of specialty packaging.

We are pleased to announce that our **Edmundston Operations** is seeking a committed individual to join our team and grow their career as a full time:

PROJECT ENGINEER / MECHANICAL ENGINEER

The challenge :

- Promote and ensure a safe work environment
- Management of mill projects from concept to commissioning
- Lead cross functional teams involving engineering consultants, equipment suppliers, unionized contractors and mill personnel to ensure projects are completed in a safe, cost effective, timely and reliable manner
- Work with a highly driven team to support mill activities.
- Coordinate inputs from execution, reliability, costing, and scheduling to effectively plan work scope

The desired profile :

- You are recognized for your sense of responsibility
- Able to organize and determine priorities
- Your autonomy and orientation in terms of teamwork
- Flexibility and availability according to operation needs
- The quality of your communication, both interpersonally and organizationally.
- You have the ability to adapt to unforeseen situations and a good ability to work under pressure

Requirements:

- Post-secondary studies in mechanical engineering or technology
- Professional Engineer (P. Eng.) is an asset
- Experience in a industrial/manufacturing environment
- Experience in the pulp and paper engineering is an asset
- Any other combination of training and relevant industrial or manufacturing experience may be considered
- Bilingualism is an asset (French and English)

The Employer offers competitive compensation and benefits
